EDUCATION

University of Cebu – Banilad Campus

Cebu City, Philippines

Bachelor of Science in Information Technology — **Cum Laude**

June 2026

- Dean's Lister, 1st–4th Year — GWA: 1.6/1.2 scale
- Capstone Project: ReForest — An IoT-Based Soil Analysis and Tree Recommendation System (2025–2026)

SUMMARY

BSIT graduate (Cum Laude) specializing in front-end and full-stack web development. Delivered the user-facing mobile application for ReForest, an IoT-enabled reforestation capstone, integrating real-time Firebase data with a soil-based tree recommendation feature. Hands-on experience with enterprise platform development through ServiceNow's Jumpstart Program. Looking to bring reliable, well-structured front-end engineering to a product team.

TECHNICAL PROJECTS

ReForest — IoT-Based Soil Analysis & Tree Recommendation System

2025–2026

Capstone Project (Reforestation) — Mobile Application Developer

- Built the mobile-facing web application that displays real-time soil moisture, temperature, and pH readings synced live from Firebase Realtime Database, fed by Arduino-based IoT sensors.
- Designed and implemented the tree species recommendation feature, translating live soil sensor data into actionable planting suggestions for reforestation users.
- Collaborated with teammates on Arduino (C++) sensor integration and the ML recommendation model to deliver an end-to-end pipeline from physical sensor to cloud database to user-facing app.

Student Enrollment System

2024–2025

- Developed a CRUD-based web application using ASP.NET Core MVC with Microsoft SQL Server to manage student enrollment records and course data.
- Designed MVC architecture components and built responsive interfaces to streamline enrollment processing and record management.

EXPERIENCE

Rococo Global Technologies Co. — ServiceNow Jumpstart Program

2024–2025

- Completed a structured training program building a Task Management System on the ServiceNow platform, using the Personal Development Interface to practice enterprise workflow patterns.
- Implemented server-side (Business Rules, Script Includes) and client-side (Client Scripts, UI Policies) scripting to simulate workflow automation and improve usability within application modules.
- Configured platform controls and business rules to enforce data integrity and access logic, gaining hands-on experience with enterprise-grade low-code/no-code development.

TECHNICAL SKILLS

Languages: Java, Kotlin, Python, PHP, C++, C#, JavaScript, SQL

Frameworks & Web: React.js, Tailwind CSS, Bootstrap, ASP.NET Core MVC

Databases: Firebase Realtime DB, MongoDB, MySQL, MSSQL

Tools & Platforms: Git, Google Cloud Platform, Arduino, ServiceNow

CERTIFICATIONS

Cisco Networking Academy — University of Cebu, Banilad Campus

CCNA: Switching, Routing, and Wireless Essentials

May 2025

CCNAv7: Introduction to Networks

Jan 2024

AI Ready ASEAN — ASEAN Foundation & Google.org

AI Learning Modules Certificate (12 hours)

Oct 2025
